Winery [2] is a graphical modeling tool. The whole idea of TOSCA is explained by Binz et al. [1].

Listings 1 and 2 show listings typeset using the lstlisting environment. minted is an alternative package, which enables syntax highlighting using pygments. This, in turn, requires Python, so it is disabled by default. In case you load it above, be sure to run pdflatex with -shell-escape option. Listings 3 and 4 show listings rendered using minted. You can point to a single line: Zeile 3.

cref Demonstration: Cref at beginning of sentence, cref in all other cases.

Abbildungen 1 shows a simple fact, although Abb. 1 could also show something else.

Tabelle 1 shows a simple fact, although Tab. 1 could also show something else. Section 1 shows a simple fact, although Sect. 1 could also show something else.

Brackets work as designed: <test> One can also input backquotes in verbatim text: `test`.

The symbol for powerset is now correct:  $\mathcal{P}$  and not a Weierstrass p  $(\wp)$ .

1. All these items... 2. ...appear in one line 3. This is enabled by the paralist package.

Please use the "qq command" or the "enquote command" to quote something. "something in quotes" using plain tex syntax also works.

You can now write words containing hyphens which are hyphenated (application-specific) at other places. This is enabled by an additional configuration of the babel package. In case you write "application-specific", then the word will only be hyphenated at the dash. You can also write application-specific, but this is much more effort.

The words "workflow" and "dwarflike" can be copied from the PDF and pasted to a text file.

Numbers can written plain text (such as 100), by using the siunitx package like that:  $100 \frac{\text{km}}{\text{h}}$ , or by using plain LAT<sub>E</sub>X (and math mode):  $100 \frac{\text{km}}{\text{h}}$ .
